

# Innovapptive Android Training Final Project

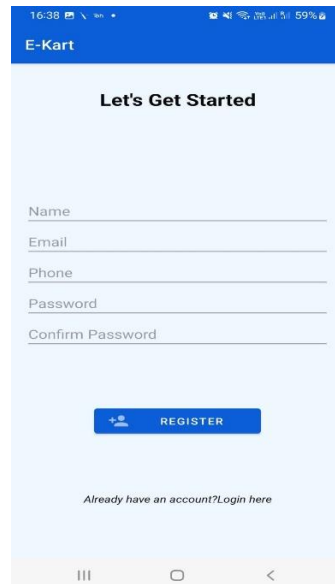

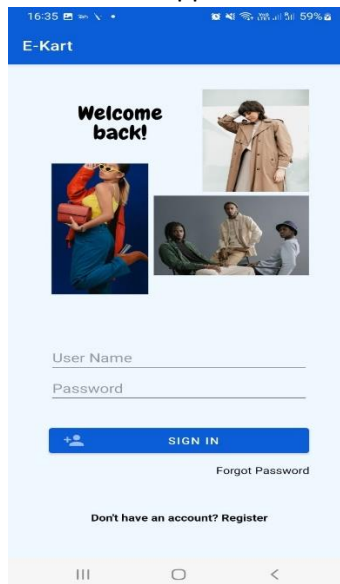

## User Stories

- This is an e-commerce application named E-Kart.

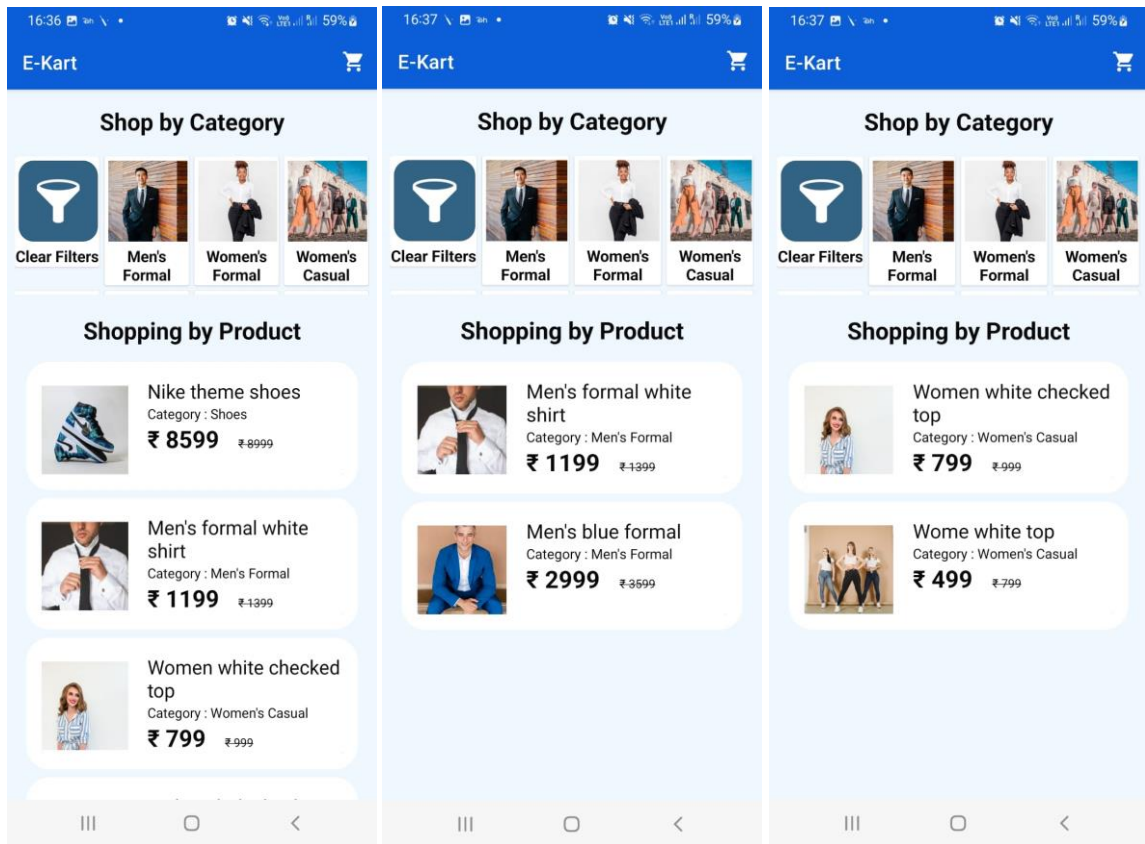

Splash Screen

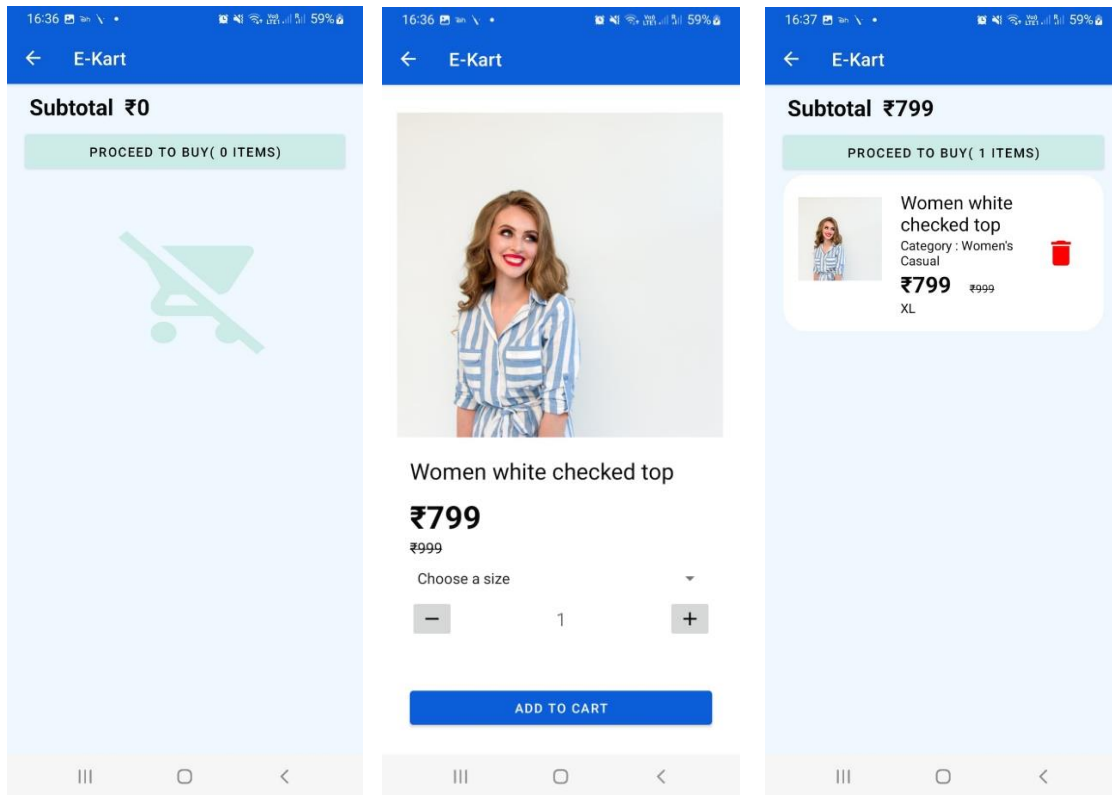

- This application contains Secured User Authentication. A new user can register himself and login with his credentials to use the app.

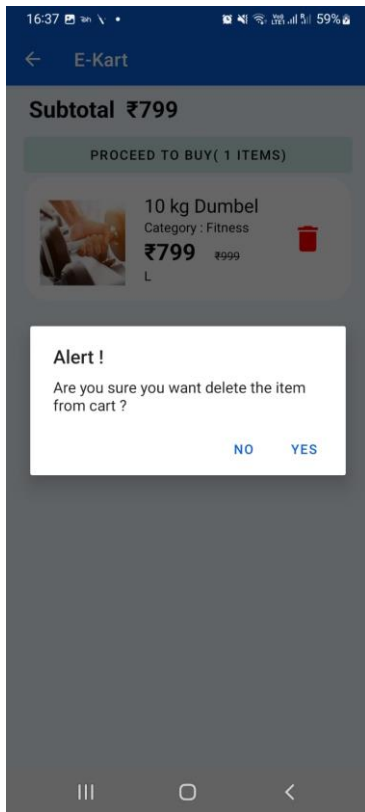

- The application contains two views (1) Shopping by category and (2) Shopping by Items. These products in the application can be filtered as per the category chosen.

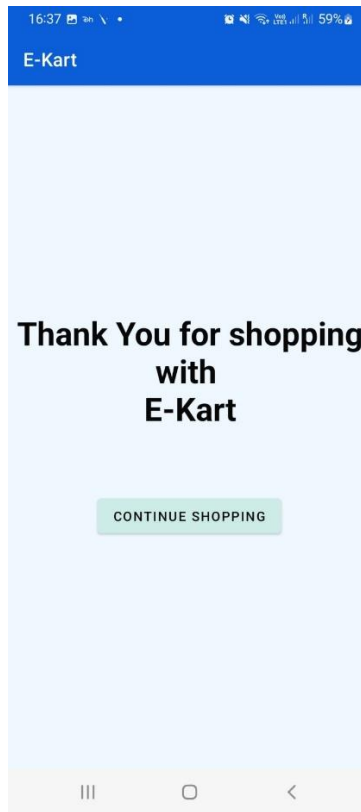

- We also have option to clear any filters added to the products as you can see in the picture above.
- On click of the particular product you can see the product details and further options to buy the product.
- The Product details page asks for the suitable size and quantity of the item you want to purchase.
- Finally you can click the Add to cart button to move the item to cart. Previously the cart was empty and now it has been added with the selected product.
- On the top total cart value is displayed, as you can see in the picture below.

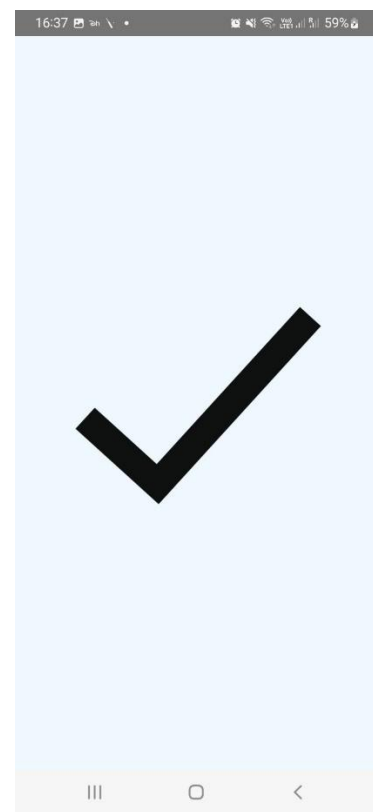

- Finally you can click on proceed to buy to purchase the items present in the cart. You will get to see a small animation of item purchased and then you can move back to the home screen to shop further.
- Similarly if you do not like the item added to cart you can fairly delete the item and choose any other.

(if deleting)

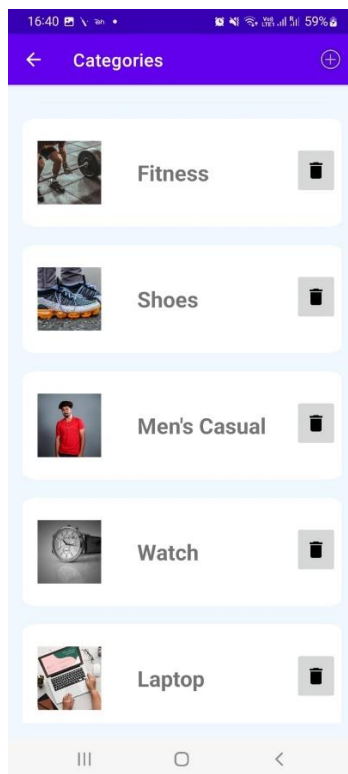

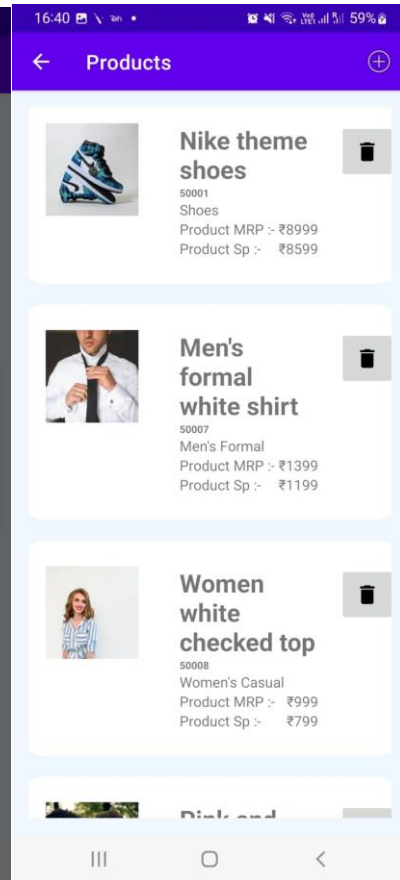

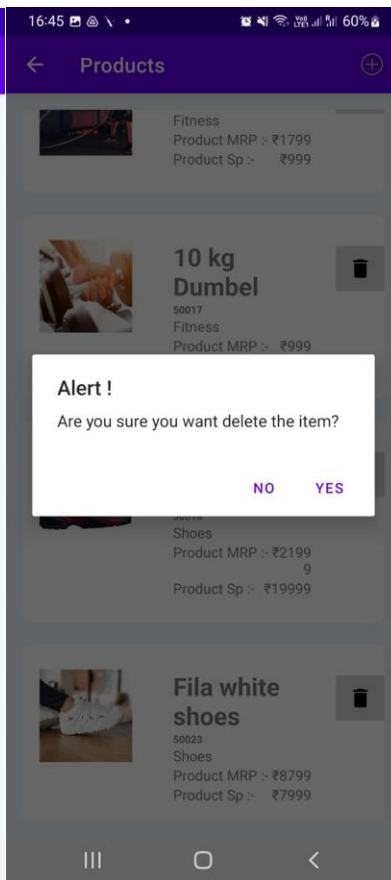

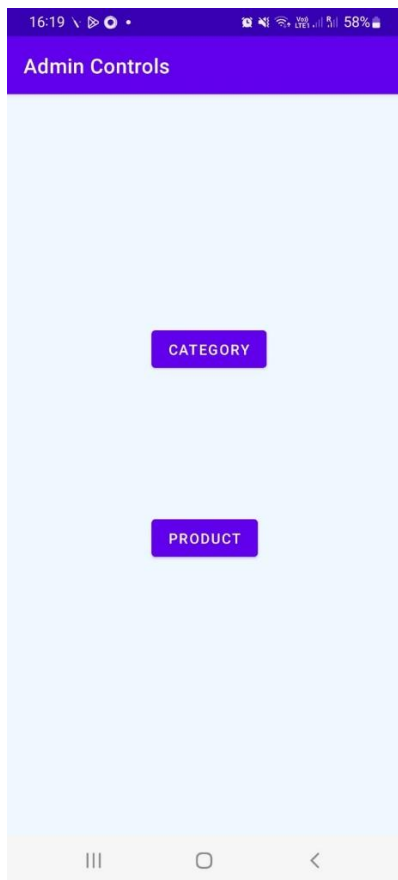

(if purchasing)

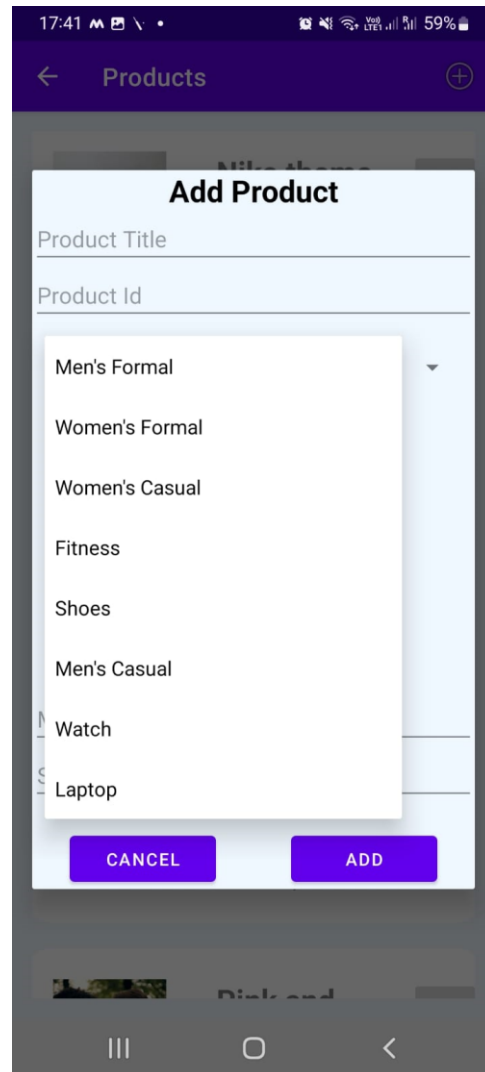

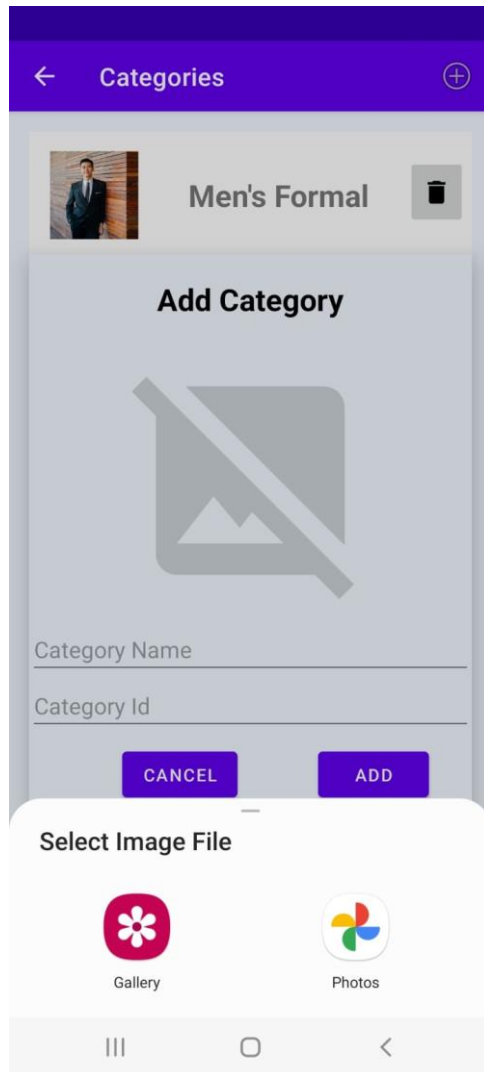

(on item purchased)

- This is not the end, you might be thinking who is adding the data to the application.
- Here is the Admin who is thoroughly controlling the application.
- Admin can add, edit or delete data in the application. He is the one who decides
  - ➔ what item to add
  - ➔ Item is of what category
  - ➔ Give an unique identifier to the item.
  - ➔ What discount price for purchasing the product

- When you click category, with the + icon you can create a new category, also add an image for that from the gallery and similarly you can do this with the product.
- Interestingly whatever the category has been added, all that will be shown in the spinner of (choose a category) column in the product adding time.

**Thank You**
